AGC Biologics

AGC Bioscience, Biomeva GmbH, and CMC Biologics Have Converged to Form AGC Biologics

AGC

Bioscience

BIOMEVA
MANUFACTURING

CMC
biologics

are now

AGC Biologics

AGC Biologics

Comprehensive Drug Substance Service Offering

Cell Line Development

Microbial and mammalian cell lines;
CHEF1® and ASPEX proprietary
expression technology platforms

Process Development

Upstream, downstream, process
characterization & validation;
High-throughput technologies

Analytical Testing

Analytical development,
characterization, stability studies,
and bioassays

Formulation Development

API and drug-product
formulation development
(both liquid and freeze-dried)

Clinical Manufacturing

Tox and Phase I / II / III product
according to
EMA / FDA / JP / ICH guidelines

Commercial Manufacturing

Market supply under
EMA, FDA, and
PMDA requirements

Quality Services

QC testing, stability testing,
QP release,
and regulatory support

Global Network of cGMP Facilities

- = current clients
- ★ = 6Pack locations

Diverse, Long-Standing Customer Base

Mix of large, mid-size and small / **virtual pharma and biotech companies**

Projects originating in the **US, EU, Asia, South America and the Middle East**

12 of the top 20 pharmaceutical companies

Over 50% of our projects are in **late-phase or commercial stage**

Proven Mammalian Experience

Specialty in orphan / fast-track / breakthrough biologics

GMP cell culture capacities between 100L and 12000L

150+ mammalian biologics developed

- mAbs
- complex proteins
- coagulation factors
- fusion proteins
- Antibody-like formats (bi- and tri-specifics)

Full process and analytical development capabilities

Excellence in Microbial Fermentation

- Extensive microbial network, with cGMP facilities in Denmark, Germany and Japan
- Flexible development capabilities and manufacturing scales with capacities from 100L to 4500L
- Capabilities to work with many different bacterial and yeast systems
- ASPEX™ proprietary expression platform
- More than 50 microbial products developed
- Experience with cytokines, hormones, receptors, antigens, nanobodies, Fabs and fusion proteins of novel and biosimilar products

Focus on Advanced and Specialized Technologies

- Extensive use of single-use technology to enable portability and scalability of process
- Deep technical expertise to address specialized formulation and handling needs of next-generation molecules
- Adoption of multi-column chromatography technology to reduce manufacturing costs through improved resin utilization
- Implementation of high-throughput technologies to accelerate timelines and lower costs
 - **ambr[®] 250**
 - Fully-automated bioreactor system for parallel processing using 100-250mL single-use bioreactors controlled by an automated liquid handling platform
 - **Octet[®] HTX**
 - Monitors up to 96 biosensors simultaneously, enabling label-free detection for protein quantification and kinetic characterization at unmatched speed

Commitment to continuously invest in innovative technologies to improve the efficiency, productivity, safety and quality of our operations

New HQs Bothell

New Capabilities

Recently implemented

New 6Pack in Copenhagen, Denmark since October 2018

R&D Center in Bothell since January 2019

Under implementation

New QC and PD laboratories in Heidelberg, Germany from May 2019

Mammalian facility in Chiba, Japan from October 2019

New Microbial facility in Bothell from Q2 2020

New Mammalian expansion facility (2 new 6Pack) in Bothell from Q2 2020

Key Success Factor

Highly Specialized PEOPLE

- Currently Employing 350 people in Bothell.
- Our expansion plans will require 150 more in the next 2 years.

Currently AGC Biologics is working in more than 50 projects worldwide.

Life Science is experiencing the biggest growth in history.

Talent is highly required.

Developing new Employees

Options to bring Talent are:

- Importing from other States/Countries.
- Hiring from other Companies in the area.
- Developing new employees:
 - High School. Project BioPath.
 - Collaboration with local Colleges.
 - Building a Training Center.

Sharing knowledge is not about giving people something, or getting something from them. That is only valid for information sharing. Sharing knowledge occurs when people are genuinely interested in helping one another develop new capacities for action; it is about creating learning processes.

— *Peter Senge* —
